

Raimund Canzler

M.Sc. Media Informatics, Full-Stack Developer

I am a software engineer with a background in human-computer interaction who enjoys making ideas come to life with code - for work, friends and myself.

Experience

Full-Stack Developer · Full time

Universität zu Lübeck, Hybrid, April 2023 - Present

- Led the **(technical) delivery** of Vernetzbar, a participatory software project for young people and social-sector stakeholders, coordinating a five-person HCI development and design team.
- Rebuilt and maintained the platform as a **monorepo** spanning a **Directus CMS**, a **Nuxt.js** landing page, and a **Vue.js SPA/PWA**.
- Introduced **CI/CD** with **GitLab**, automated tests, containerized builds, and deployment workflows, including change-based pipeline pruning to reduce build times.
- Improved **developer experience** by establishing coding standards, introducing **devcontainers**, and creating a realistic local Directus test environment from sanitized production data.
- Taught a practice-oriented **web development** module using **Nuxt/Vue**, covering different architectures of web applications, AI-assisted coding, testing, and deployment.

UX/UI-focused Developer · Internship

Universität zu Lübeck, Hybrid, June 2023 - September 2023

- Designed and implemented 'BuntesLübeck', a real-time **GPS-based multiplayer game** inspired by Splatoon that translated competitive area control into the physical world.

Web Developer · Work Study

never final, Hamburg - Remote, October 2021 - March 2023

- Contributed to Reportic's (now sitebrunch) development (front- and backend), innovating web analytics by visually displaying visitors' flows as graphs for comprehensive user interaction insights.
- Front-end development of 'Innovation Bingo,' a dynamic conference game for Beiersdorf.
- Developed the company's landing page, ensuring a meticulously crafted and responsive user experience (Nuxt, StrapiCMS).
- Contributed to Reportic's landing page using WebFlow.

Skills

Programming Languages

Java-/TypeScript, PHP, Python, Nix, Bash, HTML, (S)CSS, Go-lang, Elixir

Libraries & Frameworks

Vue & Nuxt, React, Web Components, Vuex/Pinia, TanStack Query, Tailwindcss, Express/Fastify, Vite, Webpack

Tools & Platforms

Git, Docker (Compose), GitHub & -Lab (incl. CI/CD), Turborepo, Nix(OS), Netlify, Hetzner, Figma, Affinity Suite, Miro, Adobe After Effects, Adobe Premiere Pro, MS Office

Education

Universität zu Lübeck

Media Informatics, M.Sc.

Media Informatics, B.Sc.

Interests

Kite surfing, rock climbing, smart home & self-hosting, baking, gaming

Research Assistant · Work Study

Universität zu Lübeck, Hybrid, April 2019 - March 2023

- Responsible for designing and implementing the initiative's website using Typo3 and VueJS, focusing on functionality and a user-friendly interface.
- Designed and developed the [tech.festival](#) website, extended **Moodle** with custom **PHP** plugins and webservice integrations, and automated the generation of complex documents with **Typst**.
- Planned and conducted various workshops for students and educators, covering subjects such as web development, 3D modeling with Blender, and machine learning using Python.

Some of My Projects

ContentMock - A Penpot Plugin

For the Penpot Plugins Contest 2024 I developed ContentMock, a Penpot plugin that replaces fake placeholders with realistic data so that design decisions are based on real constraints. It aims to reduce manual mock-data work, encourage semantic naming in design files and make testing edge cases (e.g. long/short values) fast. The plugin was awarded an Honorable Mention Award, including \$200 prize money.

Open-source and available on GitHub:

github.com/Scalamando/content-mock-penpot-plugin

Directus TypeScript Typegen Extension

Directus TS Typegen is an open-source Directus extension and CLI that generates accurate TypeScript types from a Directus instance to improve SDK type safety and developer experience. I built and actively maintain it based on real production pain points, and to my knowledge it is currently the only public package covering all Directus JSON field variants and relation types (including M2A); it is already used by my team and publicly available (7 GitHub stars).

Open-source and available on GitHub:

github.com/Scalamando/directus-extension-ts-typegen
