Experience

Universität zu Lübeck · Full-Stack Developer

April 2023 - Present

- Contributed 'BuntesLübeck' to the VernetzBar App, introducing an innovative game concept where players compete by digitally painting Lübeck in their team's color.
- Managed and contributed to the administration and development of 'SaLü Home,' the Moodle instance for the university's Schülerakademie.

never final · Web Developer

October 2021 - March 2023

- Contributed to Reportic's (now sitebrunch) development (front- and backend), innovating web analytics by visually displaying visitors' flows as graphs for comprehensive user interaction insights.
- Front-end development of 'Innovation Bingo,' a dynamic conference game for Beiersdorf.
- Developed the company's landing page, ensuring a meticulously crafted and responsive user experience (Nuxt, StrapiCMS).
- Contributed to Reportic's landing page using WebFlow.

Universität zu Lübeck · Research Assistant

April 2019 - March 2023

- Responsible for designing and implementing the initiative's website using Typo3 and VueJS, focusing on functionality and a user-friendly interface.
- Executed the design and implementation of the tech.festival website, utilizing Astro and seamlessly integrating Moodle API for online sign-ups.
- Planned and conducted various workshops for students, covering subjects such as web development, 3D modeling, and machine learning.
- Facilitated 3D modeling workshops for educators.

Skills

Programming Languages

Java-/TypeScript, PHP, Python, Nix, Bash, HTML, CSS

Libraries & Frameworks

Vue & Nuxt, React, Tailwindcss, Express/Fastify, Vite

Tools & Platforms

Git, Docker (Compose), GitHub & -Lab (incl. CI/CD), Turborepo, Netlify, Hetzner, Figma

Education

Universität zu Lübeck

Media Informatics, B.Sc.

Media Informatics, M.Sc.

Interests

Kite surfing, rock climbing, smart home & self-hosting, baking, gaming

Some of My Projects

ContentMock - A Penpot Plugin

For the Penpot Plugins Contest 2024 I developed ContentMock, a Penpot plugin that replaces fake placeholders with realistic data so that design decisions are based on real constraints. It aims to reduce manual mock-data work, encourage semantic naming in design files and make testing edge cases (e.g. long/short values) fast. The plugin was awarded an Honorable Mention Award, including \$200 prize money.

Open-source and available on GitHub:

github.com/Scalamando/content-mock-penpot-plugin

BuntesLübeck

BuntesLübeck is a GPS-based competitive team game where players virtually paint real-world areas and fight for territorial control in real time. I designed, developed, and partially evaluated it as a Vue 3 + Directus module inside the VernetzBar app; it has already been used at multiple public events in Lubeck and is planned for future events in 2026.

Directus TypeScript Typegen Extension

Directus TS Typegen is an open-source Directus extension and CLI that generates accurate TypeScript types from a Directus instance to improve SDK type safety and developer experience. I built and actively maintain it based on real production pain points, and to my knowledge it is currently the only public package covering all Directus JSON field variants and relation types (including M2A); it is already used by my team and publicly available (7 GitHub stars).

Open-source and available on GitHub:

github.com/Scalamando/directus-extension-ts-typegen

tech.festival Landing Page

I designed and developed the tech.festival landing page (first release in 2021, major redesign in 2025) for the yearly 4-day student workshop event by MaTZ. The implementation focused on responsive UX, technical SEO (including JSON-LD), performance optimizations (image compression and smooth animations), dynamic per-course OG image generation, and Moodle API integration in the first version; during the 2025 campaign it delivered about 10,000 impressions and 800 clicks, helping fill participant slots quickly, and it is currently live at <https://matz-techfestival.de>.
